

## The demo

---

In your proposal your group should have provided the deliverables for work package 1 and in your proposal defence meeting with the lecturer, this will have been confirmed or you will have been given an updated set of deliverables.

You will briefly demonstrate the output of this work package 1. Your marks are mostly related to the degree to which you were able to demonstrate that you have achieved the specified deliverables.

Make sure you have the demo ready to go before your scheduled time as there is not a lot of time allotted.

## Submission policy

---

- **Each team:**
  - **Sign up for your demo.** *Each team* should sign up for the face-to-face defence using the doodle poll which will be published closer to the delivery time. Provide your team name. Each team has a 10 minute slot. If you want to edit your entry you will need to email your lecturer (otherwise, your first entry will be counted).
  - After all demos are complete you will need to submit as a *zip* file (through Ninova):
    - Any working code or data-files for your project. If it is looking like the file size may be larger than the Ninova limit, contact the lecturer well in advance.
- Late submissions or those submitted otherwise than according to instructions will not be accepted.
- Academic dishonesty, including cheating, plagiarism, and direct copying, is unacceptable.

## Grading policy

---

### Components:

- *Clear articulation & demo of work done.*
- *This might include appropriate choice of visualisations, for example.*
- *Ratio of work done against work intended.*

### Bonus marks:

- *New ideas incorporated.*
- *Extra research.*
- *Depth of understanding.*
- *Extended design or analysis.*

### Deductions:

- *Irrelevant / mistaken content.*
- *Lack of preparation.*
