

BLG456E

Robotics

ROS Intro

Lecture Contents

ROS overview.

- Why ROS?
- Other middlewares.
- ROS distributions.

Getting started.

- Installing ROS & Turtlebot simulation.
- Tutorials.

Concepts:

- Directories & variables.
- Running programs.
- ROS build system.
- ROS nodes.

Lecturer:	Damien Jade Duff
Email:	djduff@itu.edu.tr
Office:	EEBF 2316
Schedule:	http://djduff.net/my-schedule

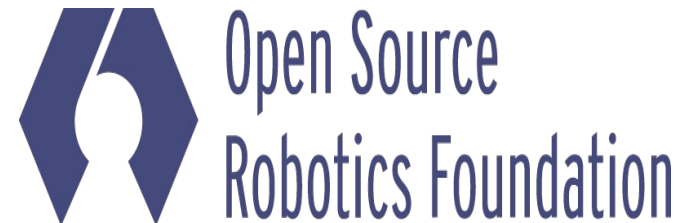

ROS Overview

- ROS = “*Robot Operating System*”
 - Not an operating system!
- Contains:
 - Middleware & tools.
 - Build/packaging system.
 - Core packages.
 - E.g. geometry tools.
 - Peripheral packages.
 - E.g. mapping.

Why ROS?

- Open source.
- Big ecosystem.
 - Many robots.
 - Many users.
 - Many tools.
- Common environment.
- Separation of concerns.
- Willow garage / OSRF.

Robot Middleware

- Main contenders:
 - ROS (Robot Operating System)
 - YARP (Yet Another Robot Program)
 - Player/Stage
 - Dozens of others (including CAST).

Pic: Willow Garage

ROS Distributions

- Distributions rolled out approx half-yearly (future: yearly):
 - Jade May 23rd, 2015.
 - **Indigo July 22nd, 2014.**
→ (L/K/X)Ubuntu 13.10 or 14.04
 - Hydro September 4th, 2013.
- Built on Ubuntu.

Getting started.

- Installing ROS & Turtlebot simulation.
- Tutorials.

Concepts:

- Directories & variables.
- Running programs.
- ROS build system.
- ROS nodes.

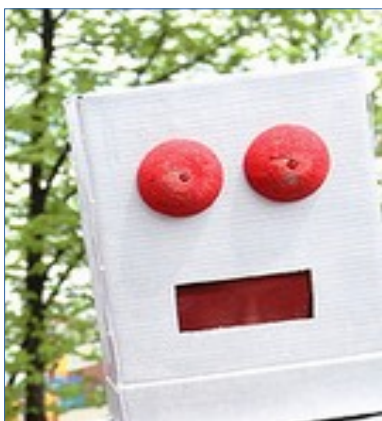

Lecturer:	Damien Jade Duff
Email:	djduff@itu.edu.tr
Office:	EEBF 2316
Schedule:	http://djduff.net/my-schedule

Installing ROS & Turtlebot

- Step 1: Install Ubuntu.
 - Option 1: Hard disk install.
 - Option 2: Virtual machine install (slow).
 - Option 3: External hard disk install.
- Step 2: Install ROS & Turtlebot.
 - Run shell script **install_456_students.sh** from https://bitbucket.org/damienjadeduff/456_indigo_turtlebot/src

How to use ROS

- Follow the **tutorials** to learn the basics.
 - Choose Indigo/Catkin tutorials.

- **Suggested tutorials:**
 - Installing & Configuring your ROS Environment.
 - Navigating the ROS Filesystem.
 - Creating a ROS Package.
 - Building a ROS Package.
 - Understanding ROS Nodes.
 - Understanding ROS Topics.
 - Writing a Simple Publisher & Subscriber (C++).
 - Examining the Simple Publisher & Subscriber.
 - Using `rqt_console` & `roslaunch`.

Schedule:	http://djduff.net/my-schedule

Directories & variables

- ROS Indigo installed in
`/opt/ros/indigo`

- To make use of it:

```
source /opt/ros/indigo/setup.bash
```

- Sets up environment variables.

Directories & variables

- Your code will be in

`~/catkin_ws/`

- To initialise it:

```
mkdir ~/catkin_ws
```

```
cd ~/catkin_ws/
```

```
source /opt/ros/indigo/setup.bash
```

```
catkin_init_workspace
```

- To make use of it:

```
source ~/catkin_ws/devel/setup.bash
```

ROS concepts:

ROS build-system

- Functionality comes in “packages”.
- **Your** programs will be built as packages.
- Toolchains for building:
 - **roscpp** – older, deprecated.
 - **catkin** – newer, cmake-based

Running programs

- Run (launch) a bundle of programs:

```
roslaunch turtlebot_gazebo turtlebot_world.launch
```

- Run a single executable:

```
roscore # coordinate node communication
```

```
roslaunch turtlebot_teleop turtlebot_teleop_key
```

ROS concepts:

A ROS program consists of communicating nodes.

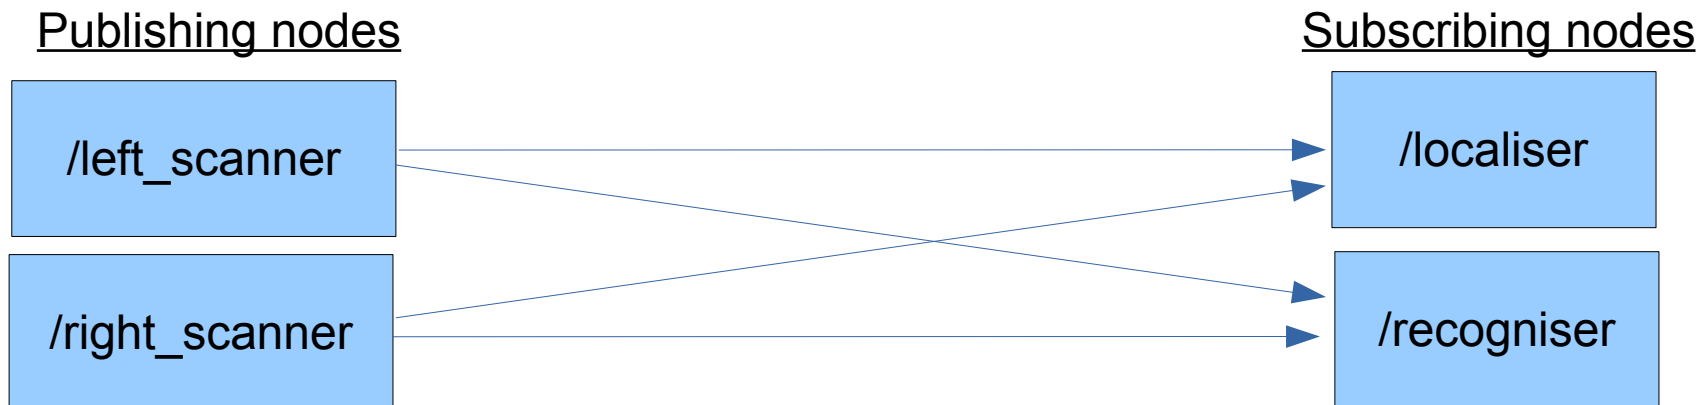

- ROS uses a publish-subscribe model.
- Programs construct nodes.
- Publishing nodes send messages to a topic.
- Subscribing nodes take messages from a topic.

ROS Node graph

Conceptual node graph

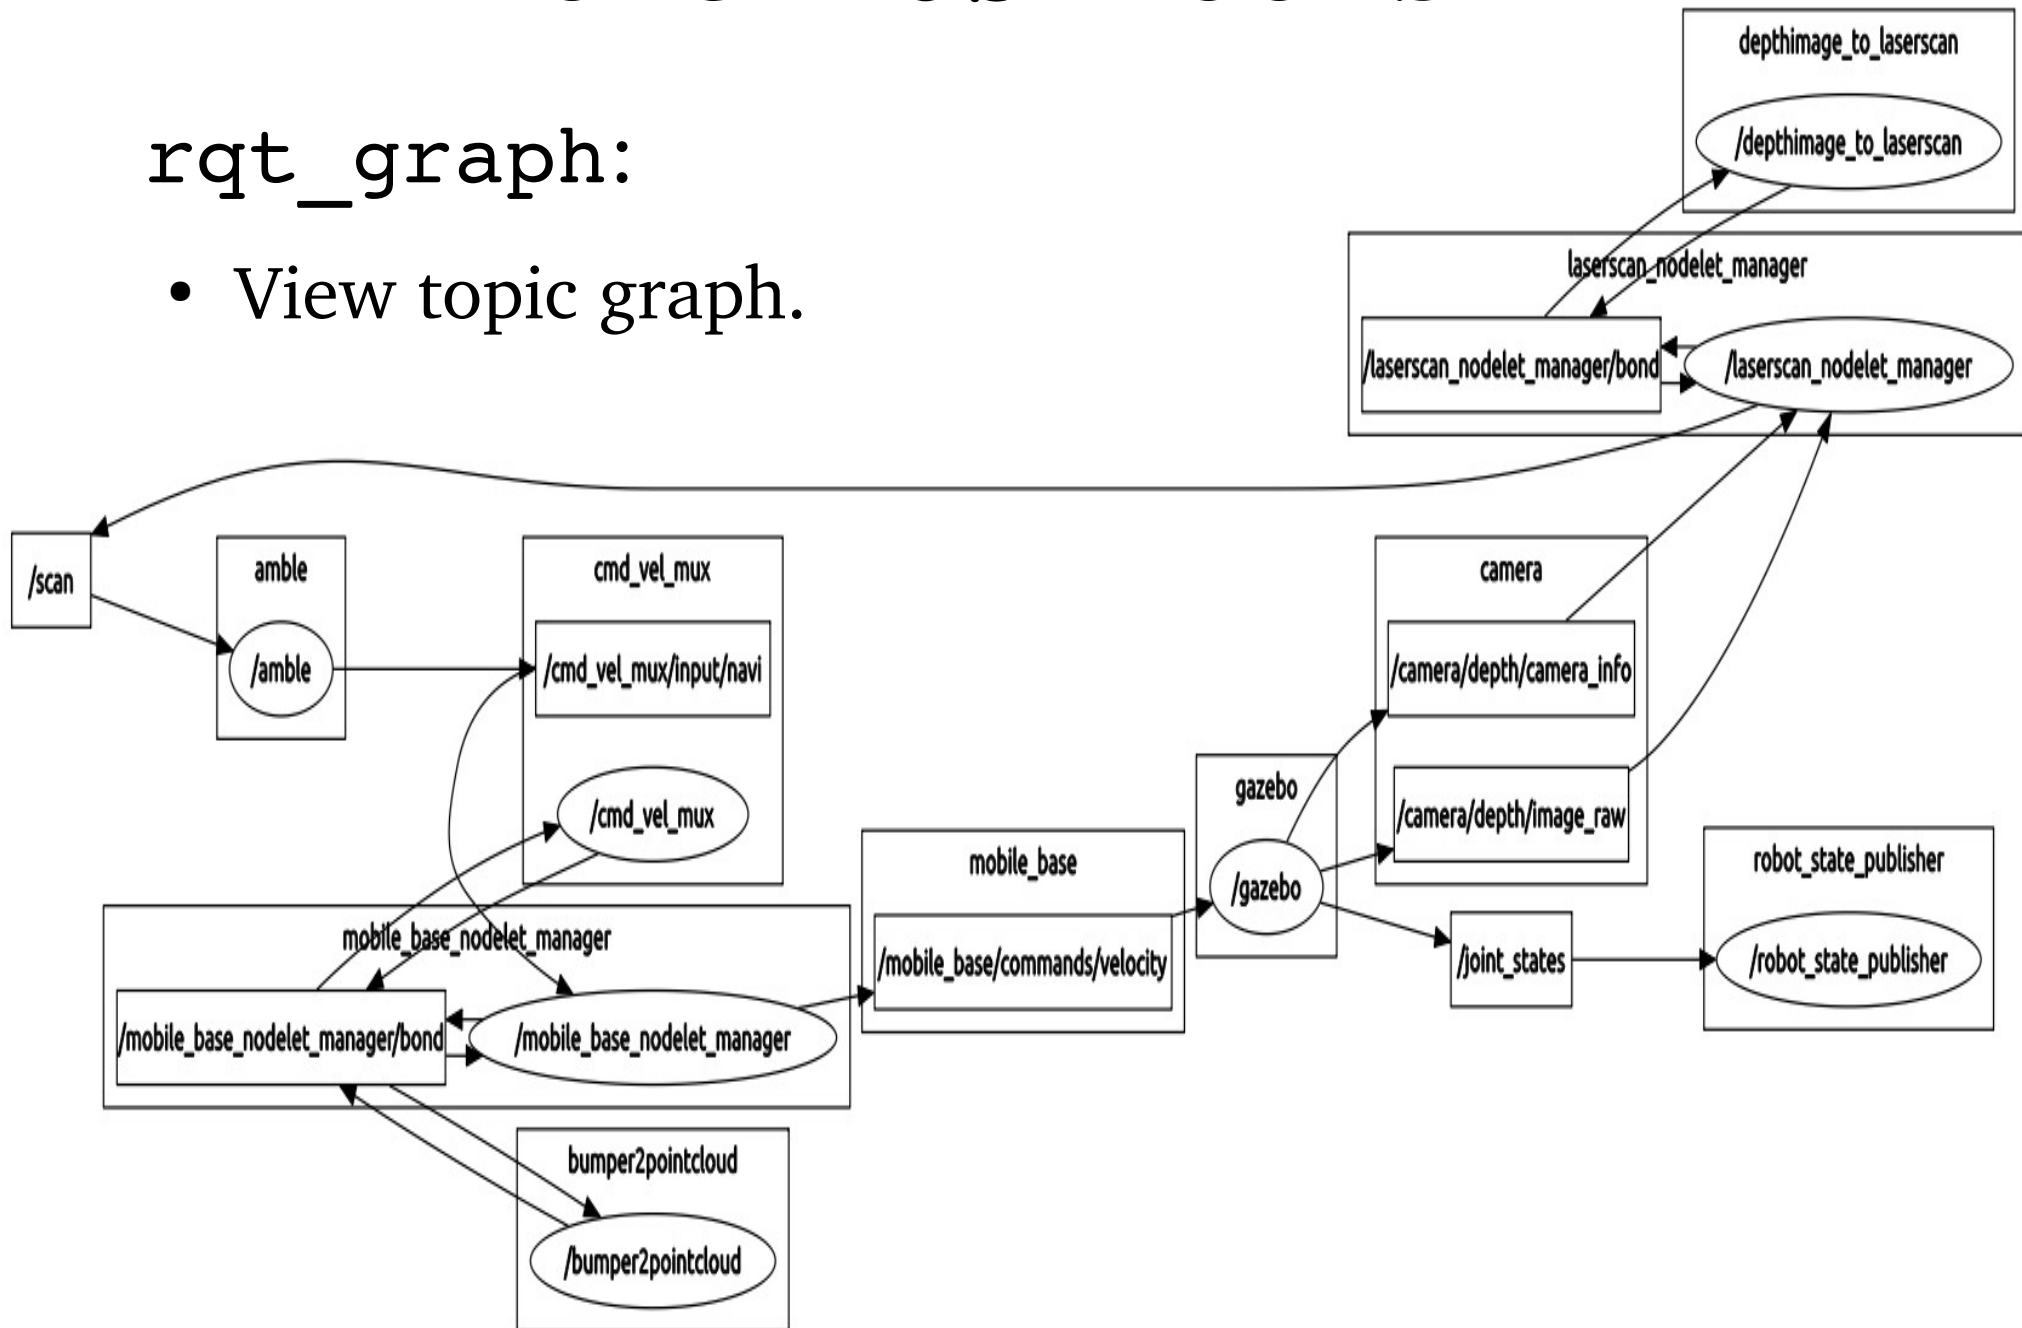

Graph of message routes

More ROS Tools

rqt_graph:

- View topic graph.

ROS concepts:

A ROS program is a set of communicating nodes.

When nodes connect:

- Publishing nodes contact the ROS master program over TCP/IP.
- ROS master gives the address of all nodes subscribed to that topic.
- Publishing nodes sends all messages directly to subscribing nodes over TCP/IP.
